

Akili Sponsors NeuroTechBOS: Data-Driven Neurotechnology

We know technology is transforming every aspect of our lives. But how can neuroscience and technology converge in medical settings, possibly in a way powerful enough to augment or even replace drugs? Come find out with this mixer event with colleagues from pharma, tech, and research, and talks by some of Boston's most interesting health technology startups!

Akili is sponsoring NeuroTechBOS' third event this season. Join us for networking, drinks, and appetizers, as well as hearing some industry insiders speak about new ideas in Data Driven Neurotechnology! Eddie Martucci (CEO, Akili Interactive) will be kicking off the night, followed by presentations from industry speakers, including Alex Goddard (Dir. Of Research, Tal Medical), and Pat Arean (Professor & Director of Targeted Treatment Development, University of Washington Department of Psychiatry and Behavioral Sciences) among others. A Q&A panel session will lead into the last 45 minutes of the night, which will include demos of some products as well as more networking opportunities!

Data-Driven Neurotechnology will be held on **Wednesday, June 15th from 6:00-9:00pm at the Microsoft NERD Center** (1 Memorial Dr, Cambridge, MA 02142). If you would like to attend, please RSVP as soon as possible to Kristin@akiliinteractive.com. You will **need your photo ID** to access the event space in 1MEM Horace Mann Room (1st Floor). Networking starts from 6:00-6:30pm with snacks, beer and wine provided. Speakers will start at 6:30pm. Q&A Panel will be from 7:35-8:15pm, followed by demos and networking to close out the night. The event is free to attend.

Akili believes that medicine, as an industry, is on the verge of a revolution. We truly believe in the power of enjoyment for patients, and we believe that technology combining clinically-validated neuroscience and high-grade consumer experiences will transform how patients think of medicine. We're happy to sponsor our friends at NeuroTechBOS at this event in their endeavor to catalyze growth of the NeuroTech enthusiasts network in Boston.

About Akili Interactive Labs, Inc

At Akili, we're in the process of building clinically-validated cognitive therapeutics, assessments, and diagnostics that look and feel like high-quality video games. Our aim is to develop a new type of Digital Medicine that can be deployed remotely directly to any patient anywhere, prescribed and tracked by physicians.
